Customer shopping behavior is broad, steady, and under-segmented

3,900 transactions across four retail categories and 50 states

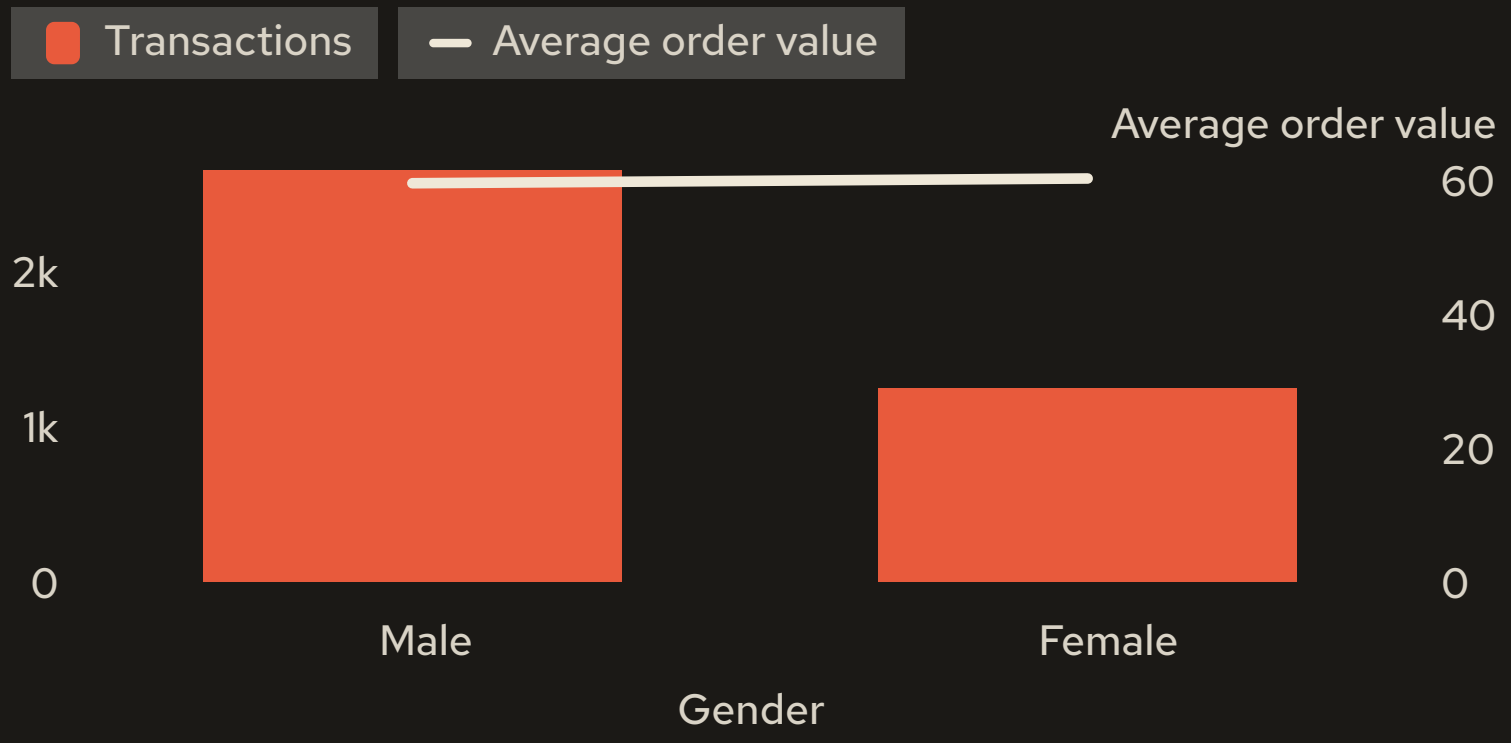

$233,081 total purchase value; $59.76 average order

Made with GAMMA

The customer base skews male, but spend per order is nearly even

Transaction mix and average order value by gender

THE READ

68.0%

of transactions are from male customers; 32.0% from female customers.

Average purchase amount is $59.54 for male customers versus $60.25 for female customers.

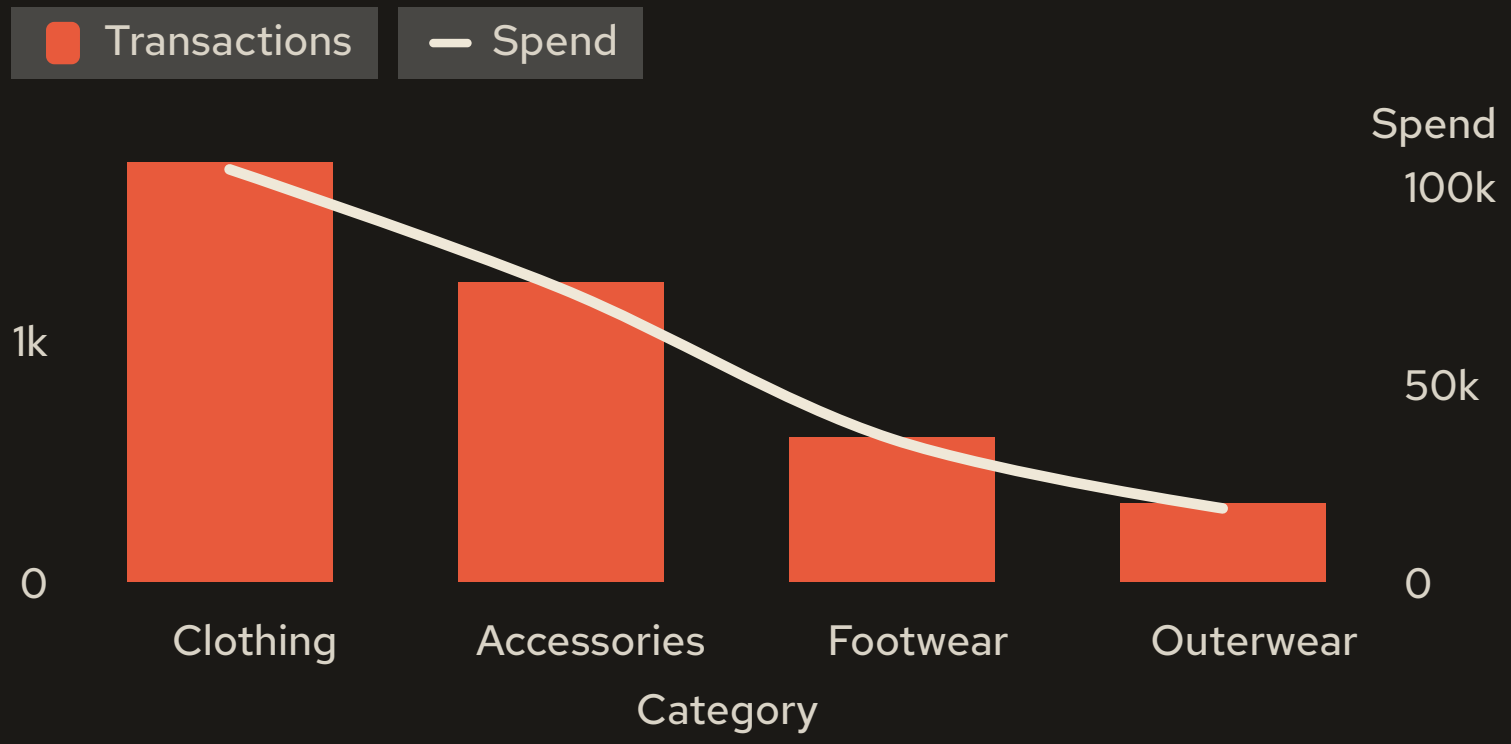

Age bands are similarly sized; no single age group dominates demand.

Turn the diagnosis into three focused tests

01

Build category-specific retention journeys

Starting with the 73% of transactions outside the subscription program.

02

Test cross-sell bundles

Around the largest pools: clothing plus accessories.

03

Use Fall as the first merchandising test window

Then compare lift against the flatter seasons.

Next analysis: cohort retention, discount lift, and customer-level repeat behavior.
